(54) Title (JA): 画像処理装置、端末装置、および画像処理プログラム

(57) Abstract:

(EN): The purpose of the present invention is to suppress the output of useless images. An image processing device (1) is provided with a composition correction unit (2) that, on the basis of an input image, outputs an output image the composition of which is in accordance with the input image. According to the input image, the composition correction unit (2) determines whether to output the output image. When the composition correction unit (2) outputs the output image, at least one of the size change, translation amount and rotation amount in correction of the input image into the output image is equal to or greater than a threshold value.

(FR): Le but de la présente invention est de supprimer la sortie d'images inutiles. Un dispositif de traitement d'image (1) est pourvu d'une unité de correction de composition (2) qui, sur la base d'une image d'entrée, délivre une image de sortie dont la composition est conforme à l'image d'entrée. En fonction de l'image d'entrée, l'unité de correction de composition (2) détermine s'il faut délivrer l'image de sortie. Lorsque l'unité de correction de composition (2) délivre l'image de sortie, au moins une valeur parmi celles d'un changement de taille, d'une quantité de translation et d'une quantité de rotation, dans la correction de l'image d'entrée vers l'image de sortie, est supérieure ou égale à une valeur seuil.

(JA): 有用ではない画像の出力を抑制する。画像処理装置(１)は、入力画像に基づき、当該入力画像に応じた構図の出力画像を出力する構図補正部(２)を備え、前記構図補正部(２)は、前記入力画像に応じて、前記出力画像を出力するか否かを決定し、前記構図補正部(２)が前記出力画像を出力するとき、前記入力画像から当該出力画像への補正におけるサイズの変化、並進量および回転量の少なくとも１つが閾値以上である。
