(54) Title (EN): DEVICE FOR ATTACHING A CROSS-MEMBER OF A DRIVER'S COMPARTMENT OF A MOTOR VEHICLE

(54) Title (FR): DISPOSITIF DE FIXATION D'UNE TRAVERSE DE POSTE DE CONDUITE D'UN VÉHICULE

(57) Abstract:

(EN): The invention concerns an attachment device for attaching a tubular cross-member of a driver's compartment to a body structure of a motor vehicle comprising a lateral flange secured by one of the faces of same to one end of the cross-member tube and by the opposing face of same to an attachment part comprising passages for an element for attachment to the body structure of the vehicle, forming the receiving face for receiving said attachment part, characterised in that said attachment part (32) is in the form of a plate with folded portions, having two opposing faces defining a front face and a rear face, and is configured to be attached facially, by the rear face of same, to said receiving face of the flange (30').

(FR): L'invention concerne un dispositif de fixation d'une traverse tubulaire d'un poste de conduite à une structure de caisse d'un véhicule automobile comprenant un flasque latéral solidaire en l'une de ses faces à une extrémité du tube de traverse et en sa face opposée à une pièce de fixation comprenant des passages pour un élément de fixation à la structure de caisse du véhicule, formant la face réceptrice de ladite pièce de fixation, caractérisé en ce que ladite pièce de fixation (32) se présente sous forme d'une plaque avec des parties repliées, présentant deux faces opposées définissant une face avant et une face arrière, et est configurée pour être fixée facialement, par sa face arrière, à ladite face réceptrice du flasque (30').
