(57) Abstract:

(EN): An information pushing method comprises: receiving route request information of a user, and obtaining, from the route request information, a departure point, a destination point, and a target time of arrival of the user (S11); obtaining weather information at the target time of the region in which the destination point is located (S12); determining a plurality of traffic routes from the departure point to the destination point of the user (S13); determining, from the plurality of traffic routes, a target traffic route corresponding to the weather information (S14); and pushing the target traffic route and the weather information to the user (S15). Further provided are an information pushing device, a server, and a storage medium, which can be used to improve the user's efficiency in reaching the destination point.

(FR): L'invention concerne un procédé de distribution sélective d'informations qui consiste à : recevoir des informations de demande d'itinéraire d'un utilisateur, et obtenir à partir de celles-ci un point de départ, un point de destination et une date/heure cibles d'arrivée de l'utilisateur (S11) ; obtenir des informations météorologiques, à la date/heure cibles, associées à la région dans laquelle le point de destination se situe (S12) ; déterminer une pluralité d'itinéraires de trafic partant du point de départ et arrivant au point de destination de l'utilisateur (S13) ; déterminer, à partir de la pluralité des itinéraires de trafic, un itinéraire de trafic cible correspondant aux informations météorologiques (S14) ; et distribuer sélectivement l'itinéraire de trafic cible et les informations météorologiques à l'utilisateur (S15).
