2. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application and necessary to the claimed invention, this opinion has been established on the basis of:

a. type of material

- a sequence listing
- table(s) related to the sequence listing

b. format of material

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US06/07598

Box No. V Reasoned statement under Rule 43 bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims <u>1-54</u>	YES
	Claims <u>NONE</u>	NO
Inventive step (IS)	Claims <u>1-54</u>	YES
	Claims <u>NONE</u>	NO
Industrial applicability (IA)	Claims <u>1-54</u>	YES
	Claims <u>NONE</u>	NO

2. Citations and explanations:

Claims 1-54 meet the criteria set out in PCT Article 33(2)-(3), because the prior art does not teach or fairly suggest humanized antibody L243 comprising the particularly recited murine framework residues, the use of the antibody for the manufacture of pharmaceutical preparations or the use of the preparations.

Claims 1-54 meet the criteria set out in PCT Article 33(4), and thus possess industrial applicability because the subject matter claimed can be made or used in industry.

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the questions whether the claims are fully supported by the description, are made:

Claims 1-54 are objected to under PCT Rule 66.2(a)(v) as lacking clarity under PCT Article 6 because claims 1-3, 45, 47, 48 and 51 are indefinite for the following reason(s): the claims refer to the "L243 antibody only by the laboratory name. This is indefinite because the same laboratory name could be used by another to identify a completely unrelated compound. The antibody should be referred to by citation in the claims of the accession number from an accepted depository or by reference to the amino acid sequence identifier of the antibody molecule..
