2. Citations and explanations:

D1 US6681034
 D2 Cucinotta T., Brigo R., Di Natale M., "Hybrid fingerprint matching on programmable smart cards",
 D3 US 5631971.

The invention is towards minutiae based fingerprint verification for on smart card processing. The claimed invention matches fingerprint templates using cluster characteristics for a plurality of clusters of minutiae. The closest art is citation D1 which discloses a method and system for fingerprint template matching including determining first and second minutiae from a template (col 2 lines 48-67) and determining the similarity values based on first and second minutiae. (col 4 lines 7-28) This differs from the claimed invention in the use of cluster characteristics being determined and compared. This differs from the cited art. Hence when read by a person skilled in the art none of the citations either individually or in obvious combination discloses all the features of the claims above. Consequently the claims are novel and involve an inventive step in the light of the citations.
