Box No. IV Text of the abstract (Continuation of item 5 of the first sheet)

In a channel zapping through multiple channels, each channel select identifies a new packet stream channel and the video coding standard of the channel is identified. Based on the video coding standard an optimal input buffer delay is identified, a packet stream for the new channel delayed by the optimal input buffer delay, and decoded by a decoding process according to video coding standard. Optionally, based on the video coding standard an optimal decoding processing delay is identified and the decoding applies an associated processing delay.
