1. This opinion contains indications relating to the following items:

- Box No. I Basis of the opinion
- Box No. II Priority
- Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- Box No. IV Lack of unity of invention
- Box No. V Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- Box No. VI Certain documents cited
- Box No. VII Certain defects in the international application
- Box No. VIII Certain observations on the international application

2. **FURTHER ACTION**

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1bis(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

3. For further details, see notes to Form PCT/ISA/220.

front cover is contaminated when the intensity of scattered light in a scattered light region in close proximity exceeds a threshold value.

Document 3 discloses storing the threshold value for each outgoing angle in a table.

Document 4 discloses setting a low threshold to detect at a far range.

However, documents 1 to 4 do not disclose providing a storage section for storing range information corresponding to the furthest range side for each measurement direction, and changing a predetermined threshold value for comparing the size of the received light level in a determination section on the basis of the aforementioned range information of each measurement direction stored in the aforementioned storage section. Even a person skilled in the art could not easily conceive of such feature.
