PATENT COOPERATION TREATY

PCT

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

(Chapter I of the Patent Cooperation Treaty)

(PCT Rule 44bis)

Applicant's or agent's file reference 10-1043-PCT	FOR FURTHER ACTION	See item 4 below
International application No. PCT/US2011/060392	International filing date (day/month/year) 11 November 2011 (11.11.2011)	Priority date (day/month/year) 14 November 2010 (14.11.2010)
International Patent Classification (8th See relevant information in Form	n edition unless older edition indicated) PCT/ISA/237	
Applicant ARIZONA BOARD OF REGENTS STATE UNIVERSITY	, a body corporate of THE STATE OF ARIZO	DNA acting for and on behalf of ARIZONA

1.			report on patentability (Chapter I) is issued by the International Bureau on behalf of the rity under Rule 44 $bis.1$ (a).
2.	This RE	PORT consists of a to	otal of 5 sheets, including this cover sheet.
			erence to the written opinion of the International Searching Authority should be read as a preliminary report on patentability (Chapter I) instead.
3.	This rep	ort contains indication	ns relating to the following items:
	\boxtimes	Box No. I	Basis of the report
		Box No. II	Priority
	X	Box No. III	Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
		Box No. IV	Lack of unity of invention
	X	Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
		Box No. VI	Certain documents cited
		Box No. VII	Certain defects in the international application
		Box No. VIII	Certain observations on the international application
4.	but not,		communicate this report to designated Offices in accordance with Rules 44bis.3(c) and 93bis.1 licant makes an express request under Article 23(2), before the expiration of 30 months from 2).

	Date of issuance of this report 14 May 2013 (14.05.2013)
The International Bureau of WIPO 34, chemin des Colombettes 1211 Geneva 20, Switzerland	Authorized officer Philippe Bécamel

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

PCT/US2011/060392 09 03.2012
PCT/US2011/060392

Box No.	Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
	stions whether the claimed invention appears to be novel, to involve an inventive step (to be non obvious), or to be industrially le have not been examined in respect of:
	the entire international application.
\boxtimes	claims Nos. 4-18, 23-25
becau	ice·
	the said international application, or the said claims Nos. relate to the following subject matter which does not require an international search (specify):
⊠ Claims 4-	the description, claims or drawings (indicate particular elements below) or said claims Nos. 4-18, 23-25 are so unclear that no meaningful opinion could be formed (specify): 18, 23-25 are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
	the claims, or said claims Nos are so inadequately supported by the description that no meaningful opinion could be formed (specify):
\boxtimes	no international search report has been established for said claims Nos. 4-18, 23-25
	a meaningful opinion could not be formed without the sequence listing; the applicant did not, within the prescribed time limit: furnish a sequence listing on paper complying with the standard provided for in Annex C of the Administrative Instructions, and such listing was not available to the International Searching Authority in a form and manner acceptable to it. furnish a sequence listing in electronic form complying with the standard provided for in Annex C of the Administrative
	Instructions, and such listing was not available to the International Searching Authority in a form and manner acceptable to it. pay the required late furnishing fee for the furnishing of a sequence listing in response to an invitation under Rule 13ter.1(a) or (b).
	See Supplemental Box for further details.

. Statement		,	
Novelty (N)	Claims	2, 3/2, 19-22	YE:
	Claims	1, 3/1	NO
Inventive step (IS)	Claims	None	YE:
	Claims	1-3, 19-22	NO
Industrial applicability (IA)	Claims	1-3, 19-22	YE:
	Claims	None	NO

Citations and explanations:

Claims 1, 3/1 lack novelty under PCT Article 33(2) as being anticipated by Jin.

Regarding claim 1, Jin discloses a plasmonic structure (paragraph 62 and 94, using the methods of Jin to form plasmonic structures) comprising: a substrate (figures 10a-10e show a method of manufacturing, paragraphs 64-68; substrate 90); a plurality of metal particles disposed on the substrate (92); and one or more metal structures electrically coupled to and disposed on a surface of each of the plurality of metal particles (100, figure 10e, paragraph 96, using the nano-partical array as seed catalysts to grow the nanowires), the metal having a structure different from the structure of the metal particles (seeds vs. nanowires, paragraph 68).

Regarding claim 3 depending upon claim 1, Jin discloses the plurality of metal particles has an average diameter in the range of about 5 nm to about 2 micron (paragraph 69).

Claims 2, 3/2, 19-22 lack an inventive step under PCT Article 33(3) as being obvious over Jin in view of Tuominen et al, hereinafter referred to as Tuominen.

Regarding claim 19, Jin discloses a method for making a plasmonic structure (paragraph 62 and 94), the method comprising: providing a substrate (90; paragraphs 64-68; figures 10a-e) having disposed thereon a plurality of metal particles (92); growing one or more metal structures electrically coupled to and disposed on each of the plurality of metal particles (nanowires 100; paragraphs 68-69; figure 10e). Jin is silent regarding providing an anode and a cathode and disposing a liquid on the surface of the substrate, such that the liquid is in electrical contact with the anode, the cathode and the plurality of metal particles; and applying a bias voltage across the metal particles and the anode.

In the same field of endeavor, Tuominen discloses a method of manufacturing nanowires (abstract) comprising providing an anode and a cathode (paragraph 100, figure 2, two electrodes are inherently a cathode and anode) and disposing a liquid on the surface of the substrate (aqueous solution; paragraph 100; see figure 2), such that the liquid is in electrical contact with the anode, the cathode and the plurality of metal particles (see figure 2; paragraph 100, the gold particles at the bottom of the substrate); and applying a voltage across the metal particles and the anode (see figure 2; paragraphs 90 and 100). It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the device of Jin with the method of manufacturing as taught by Tuominen in order to control the growth of the device.

Regarding claim 20, Jin discloses an anode is disposed on the top surface of the substrate (paragraph 50).

Regarding claims 21-22, Jin is silent regarding the liquid is an aqueous liquid (claim 21); the liquid is an aqueous solution of electrolyte (claim 22). Tuominen discloses the liquid is an aqueous liquid (paragraph 90), the liquid is an aqueous solution of electrolyte (paragraph 90). It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the device of Jin with the method of manufacturing as taught by Tuominen in order to control the growth of the device.

Regarding claim 2, Jin is silent regarding the one or more metal structures are formed by electrodeposition. Tuominen disloses the use of electrodeposition to form metal structures (paragraph 90). It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the device of Jin with the method of manufacturing as taught by Tuominen in order to control the growth of the device

Regarding claim 3 depending upon claim 2, Jin discloses the plurality of metal particles has an average diameter in the range of about 5 nm to about 2 micron (paragraph 69).

Claims 1-3, 19-22 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.
