Box No. V

**Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement**

Documents 3 and 4 disclose well-known features for switches to block packets using logical port numbers.

However, documents 1-4 do not disclose the feature of the present application wherein switches are grouped and an IP address request signal from a terminal is blocked at a physical port connected to a switch device of another group. Such a feature would not be obvious to a person skilled in the art.
