International Patent Classification (IPC) or both national classification and IPC
H04L5/00 (2006.01) i

Applicant
HUAWEI TECHNOLOGIES CO., LTD.

1. This opinion contains indications relating to the following items:

- Box No. I Basis of the opinion
- Box No. II Priority
- Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- Box No. IV Lack of unity of invention
- Box No. V Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- Box No. VI Certain documents cited
- Box No. VII Certain defects in the international application
- Box No. VIII Certain observations on the international application

2. **FURTHER ACTION**

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1bis(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.

PCT/CN2017/079079

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:
 - the international application in the language in which it was filed
 - a translation of the international application into _____, which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).
2. This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))
3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:
 - a. (means)
 - on paper
 - in electronic form
 - b. (time)
 - in the international application as filed
 - together with the international application in electronic form
 - subsequently to this Authority for the purposes of search
4. In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.
5. Additional comments:

**WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY**

International application No. PCT/CN2017/079079

Box No. V	Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement		
1. Statement			
Novelty (N)	Claims	1-28	YES
	Claims	None	NO
Inventive step (IS)	Claims	None	YES
	Claims	1-28	NO
Industrial applicability (IA)	Claims	1-28	YES
	Claims	None	NO
2. Citations and explanations:			
[1]	D1:	WO 2015057367 A1, 23 April 2015 (23.04.2015)	
[2]	D2:	CN 103249153 A, 14 August 2013 (14.08.2013)	
[3]	D1 discloses a method for wireless communication, and specifically discloses (see claims 1-30, description, paragraphs [0099] to [0138], and figures 6A to 10): a node sends to UE, on a physical carrier in a shared spectrum, a control format indicator value with respect to a frame; wherein each subframe sent by the node comprises a first EPDCCH (equivalent to a first downlink portion) and a second EPDCCH (equivalent to a second downlink portion).		
[4]	Claim 1 differs from D1 in that: (1) a base station determines a first time unit structure; (2) a unit structure having multiple combinations of downlink portions, uplink portions and GPs is		

Box No. V

Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

included; (3) a first time unit can also be a mini-timeslot, a set of mini-timeslots, a timeslot, a set of timeslots, a set of subframes and a frame.

[5] To a person skilled in the art, (1) since a base station is required to send an indicator to UE, the base station correspondingly determining a first time unit structure would be a conventional means in the art. (2) Uplink and downlink signals in claim 1 are common signals in the art, and a combined structure formed by uplink and downlink portions and GPs is a conventional means in the art. (3) The other time units in claim 1 are conventional means in the art. Thus, claim 1 is novel but does not involve an inventive step.

[6] The additional technical features of dependent claims 2-7 are partly disclosed by D1 and partly conventional means in the art. Thus, claims 2-7 are novel but do not involve an inventive step.

[7] D2 discloses a method for distributing dynamic frame structures of a Time Division Duplexing (TDD) system, and specifically discloses (see claims 1-16, description, paragraphs [0035] to [0048], and figures 1 to 5): an evolved NodeB (eNB) sends to user equipment (UE) a radio resource control protocol (RRC) instruction for entering a dynamic configuration frame structure state, and sends frame structure configuration information in a physical downlink control channel

Box No. V

Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

(PDCCH); the UE receives the RRC instruction, then detects the frame structure configuration information in the PDCCH, and configures, according to the detected configuration information, a frame structure used by a next configuration cycle. A frame sent by the UE to the eNB includes a combination of uplink and downlink data.

[8] Claim 8 differs from D2 in that: (1) a base station determines a first time unit structure; (2) a time structure is a unit structure having multiple combinations of downlink portions, uplink portions and GPs; (3) a first time unit can also be a mini-timeslot, a set of mini-timeslots, a timeslot, a set of timeslots, a set of subframes and a frame.

[9] To a person skilled in the art, (1) since a base station is required to send an indicator to UE, the base station correspondingly determining a first time unit structure would be a conventional means in the art. (2) Uplink and downlink signals in claim 8 are common signals in the art, and a combined structure formed by uplink and downlink portions and GPs is a conventional means in the art. (3) The other time units in claim 8 are conventional means in the art. Thus, claim 8 is novel but does not involve an inventive step.

[10] The additional technical features of dependent claims 9-14 are partly disclosed by D2 and partly

conventional means in the art. Thus, claims 9-14 are novel but do not involve an inventive step.

[11] Claims 15-28 set forth a base station corresponding to claims 1-14; using a functional unit to implement a corresponding function is a conventional means in the art. For the same reasons as those given with respect to claims 1-14, claims 15-28 are novel but do not involve an inventive step.

[12] Claims 1-28 are industrially applicable.
