FI/F-TERMS:

KEYWORDS OR OTHER ELEMENTS FEATURING THE INVENTION:

The invention relates to a low voltage fiscal device.

Problem: Commonly, fiscal devices have an internal AC/DC converter for operating on AC grid power, which consumes space and makes the device heavy. Alternatively, an external AC/DC adaptor is employed, for which there is no standard, and which may still require additional conversion circuits.

Solution: Provide a fiscal device that has a standard, e.g. USB, input and which only contains functional blocks that can be operated at an input voltage of up to 5.5 V.
