2. Citations and explanations :

[1] D1: WO2015171055 A1

[2] **I. Novelty and inventive step**

[3] D1 discloses (see claim 1 and description, paragraphs [0021]-[0030]) a method of operating a first base station (BS-A) in a Radio Access Network (RAN) including the first base station (BS-A) and a second base station (BS-B), the method comprising: communicating (1523, 1723) a Reference Signal Received Power (RSRP) measurement list (corresponding to the ordered list), a Coordinated Multipoint (CoMP) hypothesis, and a Benefit Metric between the first and second base stations (BS-A and BS-B).

[4] The differences between independent claims 1, 31 and the disclosure of D1 are: 1) reference signal received power corresponding to each beam, 2) in descending order to result in an ordered list of reference signal received powers, 3) an encoded ordered list of reference signal received powers. Therefore claims 1, 31 involve novelty and meet the criteria set out in PCT Article 33(2).

[5] And the differences are uncommon communication ways, therefore claims 1, 31 involve an inventive step and meet the criteria set out in PCT Article 33(3).

[6] Claims 2-15 and 32-39 are respectively dependent on claims 1 and 31 directly or indirectly, so claims 2-15 and 32-39 also meet the criteria set out in PCT Article 33(2) and 33(3).

[7] Claims 16-30 and 40-48 are corresponding to claims 1-15 and 31-39, and according to the comments on claims 1-15 and 31-39, claims 16-30 and 40-48 meet the criteria set out in PCT Article 33(2) and 33(3).

[8] **II. Industrial applicability**

[9] Claims 1-48 are industrially applicable under PCT Article 33(4).
